ECO FUEL

Warter PRO 2

switch to
eco-friendly petrol

Warter PRO 2 is a ready-to-use mixture of alkylate petrol and modern engine oil in a 50:1 ratio. This fuel has been developed for use in devices equipped with two-stroke engines. You replace regular gasoline with the PRO product, without interfering with the engine and components.

Warter PRO 4

switch to
eco-friendly petrol

Warter PRO 4 is a modern alkylate fuel for use in smaller four-stroke engines. You replace ordinary petrol with a PRO product without interfering with the engine and components. You can fill the tank with alkylate petrol without emptying it first, as it combines with regular petrol.

Key brand values of Warter Pro

**Safe for
humans**

Warter PRO petrol does not contain ethanol, toluene or benzene. The use of alkylated petrols reduces emissions of nitrogen oxide and sulphur compounds, which are toxic to humans.

**More durable than
ordinary fuel**

Warter PRO 4 and Warter PRO 2 will not delaminate and we can keep it safely in its original packaging for up to five years and in the machine tank for up to two years.

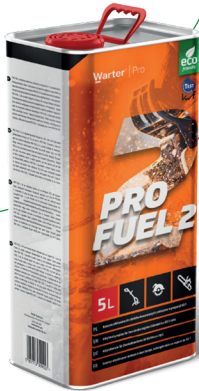

**Environmentally
safe**

Warter PRO is a brand of environmentally friendly alkylated petrol for two- and four-stroke engines used in gardening, construction, forestry equipment or small vehicles and boats, whose combustion is characterised by 40% lower emissions of harmful exhaust fumes compared to ordinary petrol and 90% lower content of harmful chemical compounds compared to classic, popular unleaded 95 petrol available at every petrol station.

**Powerful
and efficient**

Significant increase in engine efficiency and significant reduction in carbon dioxide emissions. The history of the development of this petrol dates back to the Second World War, when it became necessary to produce the most efficient fuel possible for American fighter planes. Today, this exceptionally clean fuel is used in a wide range of small vehicles, machinery and equipment powered by two- and four-stroke low-volume engines.

Warter **PRO 2**

Warter PRO 2 is a ready-to-use mixture of petrol with high quality premium biodegradable lubricating oil for two-stroke engines. The oil used in the blend ensures exceptional engine cleanliness and guarantees optimum lubrication properties over a wide temperature range. Warter PRO2 is designed for a range of equipment used in the home, workshop and garden: **cutters, hedge trimmers, chainsaws, snowploughs, generators and others equipped with two-stroke engines.**

Warter **PRO 4**

Warter PRO 4 is a practically odourless burning eco-friendly alkylate petrol for use in four-stroke engines. Using it allows not only a reduction in fuel consumption, but also a significant increase in engine efficiency with reduced carbon dioxide and nitrogen oxide emissions. Warter PRO 4 petrol is designed for a whole range of equipment used in the home, workshop and garden: **mowers, blowers, saws, generators, outboard engines and other equipment equipped with four-stroke engines.**

Why choose Warter PRO fuels?

01

Cleanest petroleum-based
fuel available

Conventional petrol available at most petrol stations are hazardous to humans and the environment. Warter PRO fuels, on the other hand, do not contain ethanol, benzene or toluene. Moreover, the use of alkylated petrols reduces emissions of nitrogen oxide, which is toxic to humans and contributes to the degradation of the Earth's ozone layer, and sulphur compounds, which cause soil acidification. The olefins emissions accompanying the operation of the power system, which contribute to photochemical smog due to their high reactivity, have also been eliminated.

02

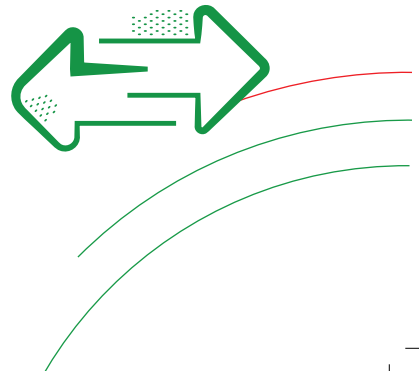

**Better than
conventional petrol**

Alkylated petrol is often referred to as 'green' because it is the cleanest fuel available on the market. It is 90% cleaner than regular commercial petrol. While conventional petrol is made up of around 350 ingredients, alkylate petrols only have up to 10. We sell our fuels in metal packaging that is fully recyclable.

03

**Works well outdoors
and indoors**

Warter PRO 4 alkylate fuel can also be used and performs excellently in closed halls, tunnels and canals and on indoor karting tracks. This is due to its chemical composition and virtually odourless burning. However, care must be taken to ensure that the room is adequately ventilated.

**ECO
POWER
FIRST**

eco
friendly

Why choose Warter PRO fuels?

04

Significantly longer shelf life

Conventional unleaded petrol starts to delaminate and change properties after only about three months. Meanwhile, alkylate petrol can be stored for several years. This eliminates the need to pour fuel from the tank at the end of the season.

05

No more problems with corrosion

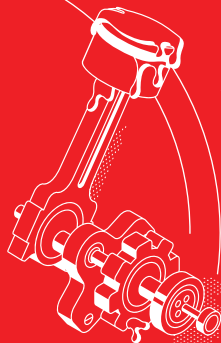

Alkylated petrols are fuel without ethanol. This gets rid of the corrosion problem of engine and equipment components where they come into contact with the fuel, and makes it easy to start the equipment even after a prolonged downtime. Ethanol is also responsible for the swelling and softening of some natural and synthetic rubbers (elastomers) and absorbs water from the air, thus causing corrosion of metal components and engine start-up problems.

06

Ready-to-use mixture for two-stroke engines

Warter PRO 2 is ready-to-use mixture for two-stroke engines. The oil used in the blend ensures exceptional engine cleanliness and guarantees optimum lubrication properties over a wide temperature range and under the highest loads.

07

No troublesome deposits

Warter PRO 2 and Warter PRO 4 petrols combust cleanly and leave no deposits in the engine, on the spark plugs or in the exhaust system. This is why manufacturers of various types of engines, used in gardening, construction and forestry equipment, as well as those used in small vehicles and boats, are increasingly recommending that their drive units should only run on alkylated petrol.

Warter Fuels S.A.

It is a leading producer and distributor of alkylate petrol, supplied to most European countries. The company's overriding value is product quality, which is monitored at every stage of production, storage and delivery.
